

The Figure 320 is an economical resilient seated butterfly valve with dimensions according ISO standards.

Features

- Bubble-tight shut-off at full rating in both directions.
- One piece, specially profiled, wafer thin disc stem.
- Extended body neck allows free access to actuator in case of pipe isolation.
- The seat and disc are the only two parts in contact with the medium.
- Face to face dimensions according ISO 3202 Part 3, K1 (ISO 5752 series 20) and DIN EN 558-1, series 20
- The F320 wafer version has four flange locating holes for end of line service under certain conditions.
- Standard actuation:
 - Handle (F414) on 50-200 mm valves.
 - Gear operators (F455) on 250-300 mm.
- The F322 lugged version is suitable for bi-directional end of line service.
- Suitable for pneumatic, electric and hydraulic actuation.

General application

Figure 320/322 is designed for applications requiring shut-off control. The valve has a non-replaceable seat and can be used in combination with manual or a gear operator, or any other common type of pneumatic, electric or hydraulic actuator.

End connections	Between flanges	End of line
F320	DN50-300: PN6-PN10- PN16 ANSI 150	DN50-300: PN16 ANSI 150
		DN50-150: PN10
F322	DN50-300: PN6-PN10- PN16 ANSI 150	DN50-300: PN6-PN10- PN16 ANSI 150

Technical data

Size range:
Figure 320 (wafer style) 50-300 mm
Figure 322 (lugged style) 50-300 mm

Pressure:
16 bar (in line and end of line)

Temperature (°C):
Minus 29°C to 120°C (EPDM seat)
Minus 15°C to 100°C (Buna-N seat)

Type	PCD	Bolt holes
F05	50	4 x Ø7
F07	70	4 x Ø9
F12	125	4 x Ø14

Notes

Dimensions are nominal ± 1 mm.

- Q is the disc chordal dimension at face of valve for disc clearance into pipe fitting or equipment.
 - Valves 50-200 mm are supplied standard with handles (F414).
Valves 250-300 mm are supplied standard with gear operators (F455).
 - YY is outside diameter of seat face.
- # The mass shown includes the standard operator.

Notes

- Application 1:** Water, seawater, lubricating types of hydrocarbons. Temp.: 0-80°C; Valve opens at least once a month.
Application 2: All other liquid applications and lubricating gasses.
Application 3: Non lubricating and dry media.
- The charted maximum sizing operating torque is the sum of all friction and resistance for opening and closing of the disc against the indicated pressure differential.
- The effect of dynamic torque is not considered in tabulation.
- In sizing operators it is not necessary to include safety-factors.
- Rated Kv = the volume of water in m³/hr that will pass through a given valve opening at a pressure drop of 1 bar.

Maximum allowable shaft torques (Nm)
